

# Enhanced Data Services

Enable enhanced data for all travel and expenses control from one source

**With travel a major part of many organisations annual budget, corporations, travel managers and travel agents are increasingly recognising that cost analysis and policy compliance is the best way to optimise travel spend.**

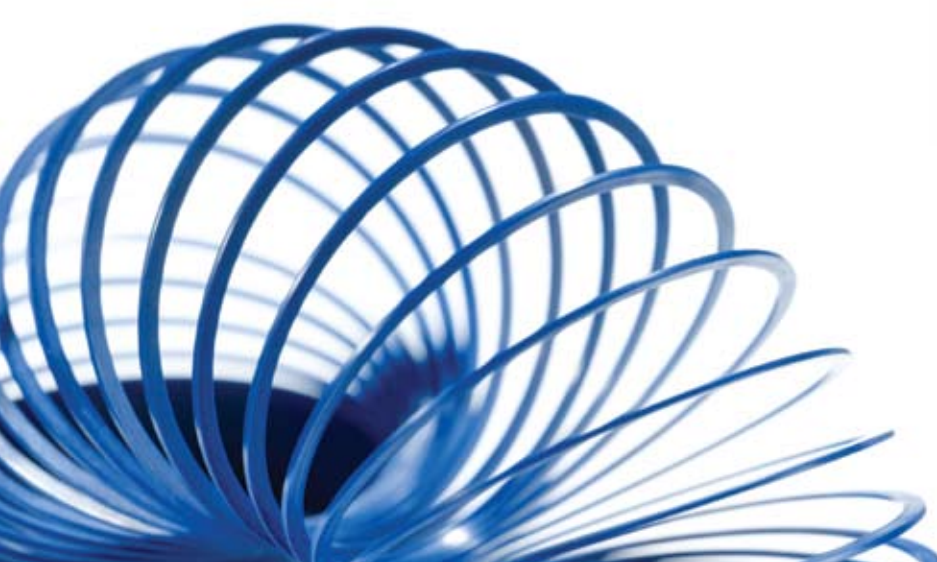

DataFlexNet is the leading European data consolidator for the business travel industry. We work individually with travel service providers to integrate their data management processes with credit card payment platforms and so offer corporates a wealth of enhanced data with their credit card purchases.

Organisations can use this richness of information to optimise their corporate travel budgets, track spend, maximise purchasing efficiencies and, because it's so easy to integrate enhanced data into existing financial systems, streamline their administration processes.

## KNOWLEDGE IS POWER

**Why leading corporates are choosing enhanced data?**

- They need comprehensive information on all company credit card accounts, to build a detailed picture of expenditure in order to maximise efficiency and to support policy design and contract negotiations.
- They want to actively investigate online bookings and travel and expenditure applications to sustain near-term savings and achieve more savings through policy and contract compliance.
- They want to be able to calculate taxes easily and quickly from across the EU and beyond.
- They want to maximise use of the corporate intranet to disseminate policy information and allow employees access to automated tools.
- They want to easily integrate data into their existing systems to enable quick and accurate reporting, track inventory and cross reference expenses.
- They want to streamline the process of employee expenses and reduce admin costs.

## What is Enhanced Data?

Enhanced data is simply more comprehensive information on purchases made with a credit card included on the credit card statement.

### Examples of basic data

- Cardholder information
- Transaction amount and date
- Currency code and conversion
- Merchant name

### Examples of enhanced data

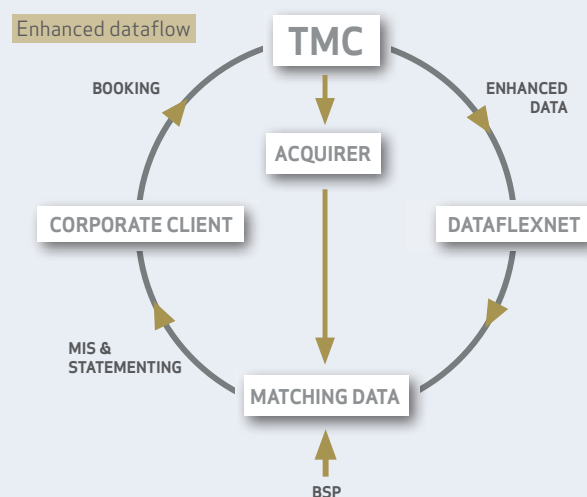

- Sales tax breakdown
- Customer references (PO or invoice number)
- Merchant order number
- Airline and rail details (passenger name, carrier, arrival and departure times, trip legs, extras, upgrades, transfer details)
- Hotel details (duration and dates of stay, rates, extras including parking, phone, minibar, other room and ad hoc services)
- Car rental details (dates of rental, daily rates, car class, insurance, fuel)
- Fuel (type, quantity, unit price, non-fuel extras)
- Conference and meetings (please advise)

## Working with DataFlexNet

With DataFlexNet's Lodge Quality Checker Systems, clients can benefit from real-time visibility of their card-based expenditure and a comprehensive suite of features, allowing them to perform cost allocation, tax management and spending analysis.

Delivered via a hosted SaaS service model which allows rapid implementation and minimal client start-up costs.

- manages an organisation's travel expenses;
- delivers detailed enhanced data on travel and expenses;
- allows clients all the benefits of card payments without the risks.

## Enhanced data – enhanced benefits

- >> Improve monitoring of employee and supplier transactions
- >> Empower employees to make the right decision of behalf of the organisation
- >> More comprehensive budget reporting and allocation to the general ledger and cost centres
- >> Easier e-procurement reconciliation
- >> Fairer expense reimbursement for employees
- >> Better purchase policy compliance
- >> Simpler tax reporting and audit requirements
- >> Greater power to negotiate prices with suppliers by focusing on salient purchase information
